AI Dynamic Face Recognition Attendance With Door Access

TT-52AI

TT-52AI is a software version of our latest facial recognition terminal that incorporates AI technology for faster, more accurate face recognition. With low light support and the ability to scan faces even when wearing masks, this device is ideal for small and medium-sized companies looking for a reliable and affordable attendance and door access solution.

Low Light Capture

Flexible Face Recognition Distance
0.5~2.5 Meters

What is NPU

NPU stands for Neural Processing Unit, which is a specialized microprocessor designed for performing AI and deep learning tasks. It is typically integrated into devices such as smartphones, cameras, and other electronic devices that require high computing power to perform complex AI algorithms. An NPU is optimized for processing large amounts of data simultaneously, making it an efficient and effective solution for AI-related tasks.
